## **Problem Definition of Bookibooo Online Bookstore**

### **Introduction:**

In today's digital age, parents and caregivers are increasingly seeking convenient and reliable online platforms to access high-quality children's books that support their child's growth and development. However, finding a specialized website that provides age-appropriate, development-focused book selections remains a challenge.

#### ➤ **Target\_Users:**

1. The primary users of the Bookibooo online bookstore are:
2. Parents of young children (aged 0–6+)
3. Caregivers (grandparents, babysitters, nannies)
4. Teachers and educators in early childhood education
5. Bookstore admins and staff
6. Children (with parental supervision)

#### ➤ **Background:**

The demand for high-quality children's books is increasing, especially books that help develop creativity, thinking, and observation skills for different age groups.

#### ➤ **Current\_Problems:**

Lack of a specialized, user-friendly online platform for parents to easily find and purchase ageappropriate and development-focused books for their children.

#### ➤ **Objectives:**

To develop an online bookstore that provides a simple, effective, and child-friendly interface for users to search, select, and purchase books by age and developmental needs.

#### ➤ **Problem\_Statement:**

The absence of a focused and user-friendly online bookstore makes it difficult for parents and caregivers to find the best books for their children's development. Bookibooo aims to address this need.

#### ➤ **Expected\_Benefits:**

- Save time for parents and caregivers
- Support children's learning and development
- Provide an efficient management system for admins

**Build a community of book lovers**

#### **1. List of Inputs to the System User Inputs:**

<b>Date</b>	<b>Prepared By (Student)</b>	<b>Approved By (Teacher)</b>
		<b>Lê Mộng Thúy</b>

<b>Design plan:</b>	<b>Document Name:</b>	<b>SWD/Form No:</b>
<b>Efective Date:</b>	<b>Version:</b>	<b>Page No:</b>

- Registration and login information (email, password, full name, user,role).
- Filtering and searching books (by category, price, status: in stock, out of stock).
- Selecting books, choosing quantity, adding to cart, removing from cart.
- Checkout information (shipping address, phone number, payment method). □ Monthly book event participation or feedback.

#### **Admin Inputs:**

- Adding/editing/deleting books (title, author, price, description, image, age group, category). □ Managing orders (confirming, updating order status).
- Managing user accounts.
- Adding news, events, and promotional content.

#### **System Inputs:**

- Book database imports (uploading book lists via CSV, Excel, etc.).
- Book cover images uploaded from the local machine.

### **2. List of Outputs Expected from the System**

- Display lists of books by age group, category, featured, and promotional offers.
- Search results with filter and sorting options.
- Book detail page (information, image, reviews).
- Shopping cart and user order history.
- Order confirmation notifications and shipping status updates.
- Admin dashboard (books, orders, users management).
- Revenue reports, best-selling book statistics (for admin).
- Event and news pages.
- Responsive interface for mobile and desktop devices.

### **3. Overview of Processes Involved in the System Customer Processes:**

- Register/Login to their account.
- Browse, search, and filter books; view book details.
- Add books to cart.
- Place orders by entering shipping details and choosing a payment method.

#### **Admin Processes:**

- Login to the admin dashboard.
- Manage book inventory (add, edit, delete books).
- Manage customer accounts.
- Manage and process orders (confirm, update, cancel).

<b>Date</b>	<b>Prepared By (Student)</b>	<b>Approved By (Teacher)</b>
		<b>Lê Mộng Thúy</b>

<b>Design plan:</b>	<b>Document Name:</b>	<b>SWD/Form No:</b>
<b>Effective Date:</b>	<b>Version:</b>	<b>Page No:</b>

- Manage content (news, events, banners, promotions).
  - View reports and analytics.

#### 4. Hardware and Software Required for Implementing the Project Hardware Requirements:

- Developer PC/Laptop (8GB RAM, SSD, Windows).
- Stable Internet connection.

#### Software Requirements:

- Frontend:
  - ReactJS (JavaScript), CSS, bootstrap 5 Web browsers (Chrome) ☐
- Backend:
  - Core PHP
  - Apache web server, XAMPP (for local development)
- Database: MySQL
- Others:
  - Git (source code management) , VS Code (code editor)
  - Payment gateway sandbox (Momo for payment integration)

No	Customer's Acceptance Criteria
1	User registration and login work securely with email validation.
2	All book listings are displayed correctly by age group and category, with filtering and search functionality.
3	Users can add books to the cart, update quantities, and successfully place orders.
4	Admin dashboard allows management of books, users, and orders.
5	The system supports responsive design for both desktop and mobile devices.
6	All payments through the integrated payment gateway are processed and reflected in the order history.
7	The system is secure and protected against common web vulnerabilities

## Project Plan

### 1. Project Details

**Name\_of\_the\_Client:**

*Bookiboo store*

**Date\_of\_Project\_Plan:**

*01-05-2025*

**Project\_Vision/Objectives:**

To develop an online children's bookstore that enables parents and caregivers to easily find, select, and purchase ageappropriate, development-focused books with a user-friendly and secure web interface.

**Scope:**

The project will deliver an e-commerce website for book sales, covering:

- All locations with Internet access (web-based platform)
- Key business processes: User registration, book catalog browsing, search and filter, cart management, order placement, payment integration, and administration functions.
- Services: Book listing, user account management, order management, basic statistics/reporting for admin.

**Our\_Understanding\_of\_the\_Client\_Organization:**

Bookibooo specializes in providing high-quality, carefully curated children's books. The client requires a modern ecommerce platform for online sales, customer management, order processing, and basic analytics, with a simple admin panel for efficient management.

<b>Date</b>	<b>Prepared By (Student)</b>	<b>Approved By (Teacher)</b>
		<b>Lê Mộng Thúy</b>

<b>Design plan:</b>	<b>Document Name:</b>	<b>SWD/Form No:</b>
<b>Effective Date:</b>	<b>Version:</b>	<b>Page No:</b>

### Project Organization with Responsibilities and Authorities

<b>Name</b>	<b>Role</b>	<b>Responsibilities</b>
[Vũ Thị Hoài Thu]	Project Manager	Overall project coordination, communication
[Thân Thế Lộc]	Backend Developer	Database design, API development, security
[Vũ Thị Hoài Thu]	Frontend Developer	UI/UX design, React implementation
[Thân Thế Lộc]	QA/Tester	Testing, bug reporting, user documentation
[Vũ Thị Hoài Thu]	Deployment/Support	Server setup, deployment, maintenance

## 2. Project Initiation/Requirement Documents

Information required from the client:

- List and categories of books to be sold (title, author, age group, category, price, images, descriptions) ☐ Logo and branding materials
- Details of desired payment methods (e.g., Momo, Cash on Delivery)
- Contact information for notifications/emails
- User roles and permission levels (if any customizations are needed)
- Any preferred workflow or admin processes

## 3. Deliverables

- Customer Requirement Specification (CRS)
- System Design Document (Architecture, ERD, API specs)
- Installation Manual
- User Manual (for both customers and admin)
- Maintenance Manual
- Source code and code documentation

## 4. Project Dependencies

- Timely provision of book data and branding materials from the client
- Access to client server or hosting environment for deployment
- Payment gateway account activation (e.g., Momo Sandbox or production keys)
- Domain name registration and DNS setup

<b>Date</b>	<b>Prepared By (Student)</b>	<b>Approved By (Teacher)</b>
		Lê Mộng Thúy

<b>Design plan:</b>	<b>Document Name:</b>	<b>SWD/Form No:</b>
<b>Effective Date:</b>	<b>Version:</b>	<b>Page No:</b>

## 5. Major Project Milestones

1. **Database and System Design Completion** – [01/05-07-05]
2. **Backend API Implementation** – [07/05-23/05]
3. **Frontend Development Completion** – [10/05-25-05]
4. **Integration Testing and QA** – [25/05-28/05]
5. **User Acceptance Testing (UAT)** – [25/05-28/05]
6. **Production Deployment** – [27/05-30/05]
7. **Project Closure/Sign-off** – [30/05]

## 6. Quality Plan

Review Activities:

- Weekly review meetings with the project team
- Monthly progress meeting with the client
- Peer code review for each major component
- Documentation review before final delivery

Testing Activities:

- Functional testing (feature-by-feature)
- Integration testing (frontend-backend interaction)
- Security testing (authentication, authorization, payment)
- User acceptance testing (UAT) with real users

Backup and Recovery Strategies:

- Daily database backups (automated)
- Weekly codebase backups to Git repository and local drives
- Server snapshot before deployment
- Disaster recovery plan: Restore from the latest backup in case of disk crash, application failure, or network issues

<b>Date</b>	<b>Prepared By (Student)</b>	<b>Approved By (Teacher)</b>

## Document Design:

Property	value
Document theme and color scheme	Child-friendly, bright and fresh. Main: #fff6e9, orange, brown.
Form - Background color	#fff6e9 (main background)
Title - Font Size	1.5rem (large label) 19px (sidebar menu) 1.07rem - 1.5rem (book/event titles)
Title - Font Color	#a66402 (highlight), #3d2e0e, #e28717 (orange shades)
Title - Font Style	Bold, sans-serif, modern, friendly
Title – Alignment	Center (main), left (sidebar/menu)
Background color of Controls on the form	#fff4db (button normal)
Foreground color of Controls on the form	1rem–16px (captions, labels)
Control Caption -- Font size	#3d2e0e, #e28717, #ff9800
Control Caption - Font Color	#3d2e0e, #e28717, #ff9800
Control Caption - Font Style	Bold, easy to read, modern
Control caption and controls - Alignment	Center (book, event, button), left (sidebar/menu)
Command button - Alignment	Centered below book image, only visible on hover (for book cards)

### List of forms to be created:

Document Name	Description	Controls on the Document
Homepage	Main landing page with book sections and events	Book grid, category menu, event carousel, search bar, AI chatbox
Login Form	User authentication	Input: email, password, Login button, create account button
Register Form	New user registration	Input: name, email, password, confirm password, Register button
Book List	Display all books by category, filter search	Book cards, filter dropdowns, pagination
Book Detail	Show details of selected book	Book info, add to cart, buy now, reviews, rating stars
Cart	Shopping cart view	List of books, quantity input, remove button, checkout
Checkout	Order confirmation and payment	Address input, payment method, place order button
Profile	User profile and personal info	Input: name, email, phone, edit/save button
Admin - User Management	Manage users (admin only)	User table, edit/delete buttons, search bar
Admin - Book Management	CRUD for books (admin only)	Book table, add/edit/delete buttons, search, pagination
Admin - Order Management	View/manage orders (admin only)	Order table, update status, view details button
Events/Promotions	List of bookstore events or promotions	Event cards, view details button
Contact/Support	Contact form for feedback/support	Input: name, email, message, send button

<b>Date</b>	<b>Prepared By (Student)</b>	<b>Approved By (Teacher)</b>

a. Proccess name:

Bookiboo

b. Proccess Description and Detail

Process Description and Details

This process defines the coding standards that all developers must follow when working on the Bookiboo. web application project.

The purpose is to ensure code consistency, readability, maintainability, and to reduce errors during development.

These standards apply to all code written for the project, including frontend (ReactJS) and backend (PHP) components.

Regular code reviews will be conducted to ensure compliance with the standards described in this document.

1. Programming Standards

- All code must be clear, maintainable, and consistent with the project’s architecture.
- Follow the MVC (Model-View-Controller) design pattern for backend and structured componentbased design for frontend.
- Source code should be well-documented with comments explaining complex logic. Avoid code duplication by reusing functions and components where possible.

2. Standards for code writing style

- Use 2 or 4 spaces for indentation; do not use tabs.
- Each statement should be placed on a separate line.
- Opening braces should be placed on the same line as the statement.
- Lines should not exceed 100 characters in length.
- Use blank lines to separate logical code blocks for readability.

Date	Prepared By (Student)	Approved By (Teacher)
		Lê Mộng Thúy

<b>Design plan:</b>	<b>Document Name:</b>	<b>SWD/Form No:</b>
<b>Efective Date:</b>	<b>Version:</b>	<b>Page No:</b>

- Always include a space after commas and around operators

### 3. Standards for declaring Variables

- Variable names must be meaningful and descriptive.
- Use **camelCase** for variable names (e.g., totalPrice, userEmail).
- Constant variables should be written in **UPPER\_CASE** (e.g., MAX\_ITEMS, API\_URL).
- Do not use single-letter or ambiguous names, except for loop counters (i, j, k).
- Declare variables in the narrowest scope possible. □ Always initialize variables before using them.

### 4. Standards for Function Declarations

- Function names should be descriptive and use **camelCase** (e.g., calculateTotal(), getUserInfo()).
- Each function should perform a single, specific task.
- The function's purpose and parameters must be clearly commented, especially for complex logic. Limit the number of function parameters to 3–4 when possible; use objects for grouping related parameters.
- Functions should return values instead of modifying global variables whenever possible.
- Avoid deeply nested functions; keep functions as simple and short as possible.

### 5. Other Standards

- Write comments for all major logic blocks and important code sections.
- Every source file should begin with a header comment including file name, author, date, and description.
- Handle exceptions and errors properly, and avoid using empty catch blocks.
- Remove unused code, variables, and functions before committing.
- Use meaningful commit messages in version control.
- Follow the project's directory and file naming conventions.
- Regularly run code linting and formatting tools.
